

Drester 1000
(manual)

Drester 8000
(automatic)

The only gun washer you need

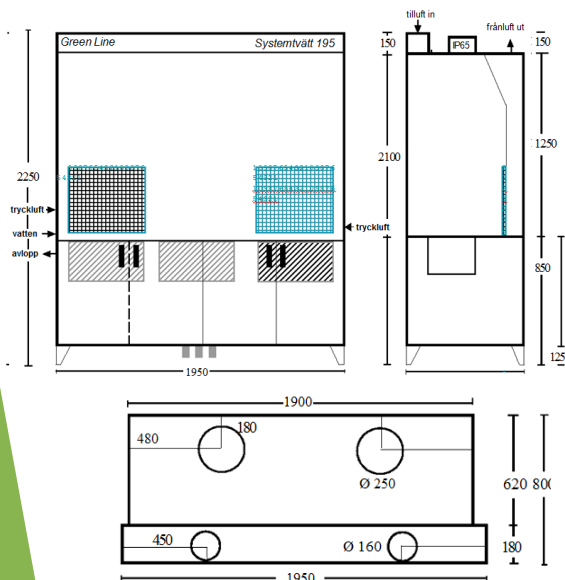

With Systemtvätt 195 you have the optimal gun wash that has everything you need ... and a little more.

A complete solution with three integrated washers, an automatic washer for solvent based painting, a manual water wash and a sink. The manual washer has coagulation of waste water built into the cabinet.

Can be used for solvent and water based paint - at the same time.

The cabinet is prepared to automatically recycle solvents in a distillatory (see accessories below).

With the new design where the bench is now on ordinary work bench height and the re-positioning of the gun washers you now have a more ergonomic working environment.
